EXPERIENCE

Wikimedia Foundation | Software Engineer(Mentor) San Francisco, California, United States | october 2025 - Present

- Mentored interns on the Outreachy project Rewriting PendingChangesBot from PHP to Python within the Wikimedia Foundation.
- Provided technical guidance on migrating legacy PHP codebases to Python with improved structure, maintainability, and performance.
- Supported interns in understanding Wikimedias open-source development workflows, including code reviews, documentation, and collaboration tools.
- Guided best practices in Python development, software design, and testing in a real-world production environment.
- Facilitated intern engagement with the Wikimedia developer community while contributing to tools that support content moderation and quality control across Wikimedia projects.

Wikimedia Foundation | Outreachy Intern/contributor Remote | March 2025 - October 2025
March Aug 2025 (Internship) | Sept 2025 October 2025(Volunteer)

- I contributed to the Wikimedia Foundation through the MediaWiki project, focusing on Enhancing VisualData's json-schema in Mediawiki.
- Implemented features and resolved issues by collaborating with open-source contributors, mentors, and project maintainers.
- I gained hands-on experience with JSON, PHP JavaScript, MediaWiki, Git/GitHub, and APIs.
- Produced clean, documented code and actively participated in code reviews, project discussions, and community meetings.
- Improved my skills in remote collaboration, open-source contribution, and agile development practices.

Ocaml | open source contributor remote | october 2023 - december 2023

- Collaborated with the OCaml development team as Outreachy applicant.
- Completed a selected task to rearrange the footer links in the footer template (footer.eml) of the OCaml project's website, improving navigation and user experience.
- Successfully reorganized footer links according to specified guidelines, ensuring seamless integration with the existing website design.
- Actively participated in team discussions, adhered to project standards, and contributed to continuous improvement efforts.

SKILLS

Programming Languages:	Javascript, Python, MySQL, HTML/CSS, PHP, Typescript
Libraries/Frameworks:	React, Next.js, Node.js, Bootstrap, Express.js, TailwindCSS
Tools / Platforms:	Git/GitHub, Visual Studio Code (VS Code), Docker, Postman
Databases:	MySQL, MongoDB

PROJECTS / OPEN-SOURCE

Contributed to OCaml Project: Footer Template Restructuring

As a participant in Outreachy contirbution stage, successfully completed a task to rearrange the links within the footer template (footer.eml) of the OCaml project's website. The task involved reorganizing the footer links for improved navigation and user experience.

Key Achievements:

- Rearranged footer links according to specified guidelines, enhancing the website's usability.
- Collaborated with the OCaml development team and adhered to project standards and guidelines.
- Ensured seamless integration of the updated footer template with the existing website design.
- Actively participated in discussions and contributed to the project's continuous improvement efforts.

This task was selected as an Outreachy issue, showcasing my commitment to open-source contributions and my ability to collaborate effectively within a development team.

MediaWiki VisualData JSON-Schema Improvements (Outreachy Round 30 & Volunteer) | [Link](#) *json-schema, Javascript, MYSQL, PHP, Git/GitHub, Phabricator.*

- I contributed to MediaWikis VisualData extension by implementing JSON-Schema support, improving structured data handling across Wikimedia projects
- Collaborated and contributed with project maintainers to build an extension that simplify importation of pages, schemas and slot with an editor that handles CRUD operation of the pages.
- Continued as a volunteer after internship, maintaining and enhancing the extension by writing code, reviewing feedback, and raising PRs.

Cat-a-lot Gadget (Wikimedia Commons) (Volunteer Contribution) | [Link](#) *Javascript, MediaWiki Gadgets*

- Improved the Cat-a-lot JavaScript gadget, a widely used tool on Wikimedia Commons for bulk photo categorization.
- Investigated and fixed a bug in the Cat-a-lot gadget where selecting a protected file caused the in-progress dialog to hang indefinitely.
- Enhanced error handling by adding callbacks, creating user-friendly dialogs (Ignore & continue / Stop editing), and improving feedback to users.
- Improved UI experience with better CSS, dark mode support, and modularized code to separate error display logic.
- Ensured the fix was reviewed and merged into the production version.
